

SUPPRESSION TREATMENT

1. Ultraviolet light inspection determines contaminated areas.
2. Urine Pre-treatment suppresses urine related odors. Dislodges and liquefies urine deposits for removal of carpet fibers.
3. Truck mounted steam extraction for removal of urine deposits with water claw.
4. Bio-Enzymatic treatment using all natural enzymes as a catalyst for the decomposition of organic related odors.
5. Urine stain remover is formulated to remove urine stains from carpet.

WARNING: Keep animals and children away from urine areas until carpet is completely dry as skin irritation may occur.

DECONTAMINATION TREATMENT

1. Ultraviolet light inspection determines contaminated areas.
2. Disengage carpet to expose the affected areas.
3. Cut out and dispose of contaminated padding.
4. Subfloor treatment with odor trapping products.
5. Replacement of padding with new rebond padding.
6. Bio-Enzymatic treatment of carpet backing using all natural enzymes as a catalyst for the decomposition of organic related odors.
7. Re install and re-stretch carpet.
8. Urine Pre-treatment suppresses urine related odors. Dislodges and liquefies urine deposits for removal of carpet fibers.
9. Truck mounted steam extraction for removal of urine deposits with water claw.
10. Bio-Enzymatic treatment using all natural enzymes as a catalyst for the decomposition of organic related odors.
11. Urine stain remover is formulated to remove urine stains from carpet.

WARNING: Keep animals and children away from urine areas until carpet is completely dry as skin irritation may occur.

ODOR PROBLEMS??
Is your best friend
offending your
senses?

The Science of odor elimination

Cleaning and removing the source is your first line of defense in odor control. When Residual odors are likely to be a problem...we can succeed where others cannot. Using the newest technology available to NEUTRALIZE odor in the airspace as well as in materials. Although the neutralization unit is specialized and highly potent, it is not always necessary to vacate the premises during use.

Enzyme/Pairing Agent Deodorization

This is an effective method for eliminating pet odors in materials which are to be salvaged. First the offending materials must be cleaned as thoroughly as possible. Then the enzymes will simply digest the residual offending materials. Pairing agents neutralize odors and are very effective when used with enzymes. The entire procedure can be expanded to treat the air-space with our special odor neutralization units.

Products are biodegradable and phosphate free and we are voc compliant.

Tools to do the job right.

The restorator uses Vaportek's patented essential oil membranes to release a non-toxic odor-neutralizing dry vapor into the air. To eliminate odor quickly,

Water claw subservice spot remover the most effective spot remover on the market. Has the ability to extract through the carpet and padding down to the decking.

High density ultraviolet light helps to find the spot from the residue left behind on carpet fibers and textiles.

Hydro source meter will pin point the area affected moisture area under the carpet by sensing moisture.
